Technical Manual

[The guide of LVpro. 1]

-Acid hair straightener

Hair quality diagnostic (Consultation)

Diagnose hair texture and damage. Especially when dealing with severely damaged or bleached hair, carefully judge whether the hair can withstand the heat of a straightener.

Shampoo if necessary and dry completely with a towel

(For hair with a silicone-based conditioner, be sure to wash the hair with shampoo.)

Apply "LVpro.01" Applying amount

Medium hair: 150g ~ / Long hair: 200g ~

Apply generously with a brush 1 cm away from the root. Please note that if the dose is insufficient, the effect will be reduced.

Standing (heating): The time is shown in the table below.

* Cover the hair with plastic wrap before heating. *The temperature is set so that the "Treatment", so be careful not to overheat.

(This is a guide. Please adjust according to the hair.)

0	Levels of damage	Fine hair	Normal hair	Rough hair
	Low damage hair	30min	30min	30 ~ 40min
	Moderately damaged hair	25min	30min	30min
Rest time Chart	Extremely damaged hair	15min	20min	25min
	(Straight permed hair) Extremely damaged hair	15min	20min	20min

Rinse with water

- ·No need for softening test, rinse directly.
- · Rinse 1st dose thoroughly with a mild shampoo without rubbing your hair. (If the hair is tangled, add a little hair conditioner and rinse.)
- Blow dry hair: Comb by hand and blow straight
- Hair straightener iron operation

Apply generously to hair using the applicator.

180°C (standard)

- · Slice width: 1cm-1.5cm (For strong kinky hair, use a thin slice width)
- · If there is no special problem in the part other than the retouch, put 2 to 3 panels on the tip of the hair and iron it.
- → For damaged or bleached hair, lower the temperature of the iron.
- Apply "LVpro.02"

Stand for 10-15 minutes

In addition, LV pro.2 dose has a repairing effect. If the dosa is insufficient, the effect will be reduced. Rinse

Styling

When using "LV Serum" as a non-rinse treatment, use only a small amount. Applying too much may cause stickiness.

- ·No need for softening test, rinse directly.
- Rinse 1st dose thoroughly with a mild shampoo without rubbing your hair. (If the hair is tangled, add a little hair conditioner and rinse.)
- Blow dry hair: Comb by hand and blow straight
- Hair iron operation:

New hair

180°C (standard)

· Slice width: 1cm-1.5cm (For strong kinky hair, use a thin slice width)

• If there is no special problem in the part other than the retouch, put 2 to 3 panels on the tip of the hair and iron it.

Hair iron operation:

Damaged hair C ends section

160°C

· For the damaged hair ends, please use a low temperature, and do not apply force.

Apply "LVpro.02" Stand for 10-15 minutes

Apply generously to hair using the applicator.

In addition, LV pro.2 dose has a repairing effect. If the dosa is insufficient, the effect will be reduced.

Rinse

Styling

When using "LV Serum" as a non-rinse treatment, use only a small amount. Applying too much may cause stickiness.

Points for using "LV pro."

- 🖈 If the amount of the agent applied is too thin, the spread may become loose. It is important to apply a sufficient amount. (Medium hair: 180mL)
- For hair that has been straightened before, "LVpro." has a repairing effect even without re-perming. Please apply it for about 10 minutes and heat it to make the hair more shiny and smooth.
- Dry your hair well before perming. If moisture remains, it may cause damage to the hair iron.
- Combined with other companies' products, the dose may be too strong and cause hair damage.
- Be careful when handling hair that is already badly damaged and has no core after the hair quality diagnosis.
- * Hair color may become lighter depending on the hair quality and damage.

How to improve rough hair with the high-performance treatment LVpro.

! Hair quality diagnostic (Consultation)

Diagnose hair texture and damage. Especially when dealing with severely damaged or bleached hair, carefully judge whether the hair can withstand the heat of a straightener.

1 Shampoo if necessary and dry completely with a towel (For hair with a silicone-based conditioner, be sure to wash the hair with shampoo.)

Rinse with water

- ·No need for softening test, rinse directly.
- Rinse 1st dose thoroughly with a mild shampoo without rubbing your hair. (If the hair is tangled, add a little hair conditioner and rinse.)
- Completely dry
- 6 Hair straightener iron operation

160°C

★ For the rough hair , please use a low temperature, and do not apply force.

· Apply "LVpro.02"

Stand for 10-15 minutes

Apply generously to hair using the applicator. In addition, LV pro.2 dose has a repairing effect. If the dosa is insufficient, the effect will be reduced.

7 Rinse

· 8 Styling

When using "LV Serum" as a non-rinse treatment, use only a small amount. Applying too much may cause stickiness.

Tips and precautions for improving Rough hair

- When perming the tail, please adjust the volume in advance so that the surface is heated and the finish will be better.
- ★ It can improve the problem of fluffy hair, but it cannot completely cure the problem of Rough hair .
- ★ After finishing the treatment for Rough hair improvement, follow up with another hair care treatment.

A digital perm that uses the isoelectric point of the hair to create a loose and voluminous texture.

1 Shampoo if necessary and dry completely with a towel

(For hair with a silicone-based conditioner, be sure to wash the hair with shampoo.)

Since it is heated with a chemical agent, apply a heat-reactive treatment such as "Elcalactone" from the middle to the end of the hair when permin

Apply "LVpro.01"

If necessary, use "LVpro. Booster G48" . (See the recipe at the bottom of the manual ①)

4 Curl up

6 Heating and standing: See the table below for the time

(Just for reference. Please adjust according to hair type.)

Use a heat shield to protect the face and around the surface, refer to the following times for heating.

Hair quality	Set temperature	Heating time	
Normal hair	60℃	5~10 min	
Fine hair	50∼55°C	10 min	

6 Test for curl

After heating, unwrap a curl for a test to check the curl. If the curl is not enough, reheat at the same temperature for 2~3 minutes.

Rinse hair

Apply in two times, leave on for 5 min + 5 min

After washing with water with a dropper, apply LVpro.02 (lotion type) two times for 5 minutes + 5 minutes.

9 Remove the rod Skill Apply "LVpro.02" "LOTION" Stand for 5 minutes

After perming, apply LVpro.02 (lotion type), massage into hair strands, and let stand for 5 minutes to improve the fixing power.

Styling

When using **"LV Serum"** as a non-rinse treatment, use only a small amount. Applying too much may cause stickiness.

Use a straightener and a digital perm to improve the problem of kinky hair and create a natural and dynamic hairstyle

Hair quality diagnostic (Consultation)

Diagnose hair texture and damage. Especially when dealing with severely damaged or bleached hair, carefully judge whether the hair can withstand the heat of a straightener.

Shampoo if necessary and dry completely with a towel

(For hair with a silicone-based conditioner, be sure to wash the hair with shampoo.)

* Cover the hair with plastic wrap before heating.

*The temperature is set so that the "Treatment".

so be careful not to overheat.

·When straightening the roots, choose the solution according to the level of frizz.

(Including the use of "LVpro.Booster G48", please refer to the bottom of the manual ① for the recipe.)

·Apply [NATURAL] or [HARD] to the part of the hair that will be curled from the middle to the end.

Rinse with water

- ·No need for softening test, rinse directly.
- · Rinse 1st dose thoroughly with a mild shampoo without rubbing your hair. (If the hair is tangled, add a little hair conditioner and rinse.)
- Blow dry hair: Please straighten the part to be ironed by hand.
- Hair straightener iron operation

180°C (standard)

- Slice width: 1cm-1.5cm (For strong kinky hair, use a thin slice width)
- · Press firmly on the root and lightly tap the part to be curled
- 6 Curl up

After perming your hair with the straightener, wet the part you want to curl with the spray and roll it up.

Digital perm heating

Heating at 80-90°C for 7 minutes

Since the water content is already low, set the heat to "High temperature" and "Short time".

Remove the rod

You can also apply the 2nd dose with the curls on. It can make a noticeable curl. In this case, please reverse the order of 8 and 9 .

Apply "LVpro.02"

Stand for 10-15 minutes

Be careful not to stretch the curls at the ends of the hair.

Styling

When using "LV Serum" as a non-rinse treatment, use only a small amount. Applying too much may cause stickiness.
